MoodCheck

Part A. Please place a check after the statements below that <i>accurately describe you</i> .	
During times when I am not using drugs or alcohol:	
I notice that my mood and/or energy levels shift drastically from time to time.	
At times, I am moody and/or energy level is very low, and at other times, and very high.	
During my "low" phases, I often feel a lack of energy, a need to stay in bed or get extra	
sleep, and little or no motivation to do things I need to do.	
I often put on weight during these periods.	
During my low phases, I often feel "blue," sad all the time, or depressed.	
Sometimes, during the low phases, I feel helpless or even suicidal.	
During the low phases, my ability to function at work or socially is impaired.	
Typically, the low phases last for a few weeks, but sometimes they last only a few days.	
I also experience a period of "normal" mood in between mood swings, during which my	
mood and energy level feels "right" and my ability to function is not disturbed.	
I then notice a marked shift or "switch" in the way I feel.	
My energy increases above what is normal for me, and I often get many things done I would	
not ordinarily be able to do.	
Sometimes during those "high" periods, I feel as if I have too much energy or feel "hyper".	
During these high periods, I may feel irritable, "on edge," or aggressive.	
During the high periods, I may take on too many activities at once.	
During the high periods, I may spend money in ways that cause me trouble.	
I may be more talkative, outgoing or sexual during these periods.	
Sometimes, my behavior during the high periods seems strange or annoying to others.	
Sometimes, I get into difficulty with co-workers or police during these high periods.	
Sometimes, I increase my alcohol or nonprescription drug use during the high periods.	
Total	

Part B. The statements in Part A (not just those checked) describe me (circle one of the answers below):

Not at all	A little	Fairly well	Very well
(0)	(2)	(4)	(6)

Add the number in parentheses in Part B to your checkmark total from Part A.

Part C.

	Grandparents	Parents	Aunts/Uncles	Brothers/Sisters	Childre	n		
Suicide								
Alcohol/Drug Problems								
Mental Hospital								
Depression Problems								
Manic or Bipolar								
Has a health professional ever told you that you have manic-depressive illness or bipolar disorder?						No		
Have you ever attempted suicide?						Yes No		

(please continue with part D, over)

MoodCheck

Part D.																	
How old were you when you first were depressed? (circle one)	As long as I can rememb	n C	Grade chool		fiddle chool		High school								1	8-24	> 24
How many episodes of depression have you had?	Or	One		2-4			5-6			>10							
Have antidepressants ever caused: (<i>circle all that apply</i>)	Excessive energy		vere mnia	Agit	ation	Irri	itabi	lity		cing ughts	Talking a lot						
How many antidepressants have you tried, if any?	None	None 1			2	2 3			3		>3						
Has an antidepressant you took worked at first, then stopped working?		No					Yes										
Do your episodes <i>start</i> gradually, or suddenly?	Gra	Gradually			n't say	't say			Suddenly								
Do your episodes <i>stop</i> gradually, or suddenly?	Gr	Gradually C			n't say	,	Suddenly										
Did you have an episode after giving birth?	No	No Withi			in 6 months Withi			Within 2 months			Within 2 weeks						
Are your moods much differen at different times of year?	t No	No effect of time of year Yes, seasonal s				onal s	l shifts										
When you are depressed, do you sleep differently?		No		Sleep			o less			Sleep more							
When you are depressed, do you eat differently?		No		Eat l			less			Eat more							
When you are depressed, what happens to your energy?	Nothin	Nothing It var		ries a lot		,	Very low			Extremely low, can hardly move							
In episodes, have you lost contact with reality? (delusions voices, people thought you were odd)	5,	No				Yes											

If your total score from Parts A and B is **greater than 16**; or if you have **lots of circles** in shaded boxes on this page, you may need to learn more about "mood swings without mania". See <u>www.PsychEducation.org</u>. This is something to learn about, not necessarily about *you*.

If your total score from Parts A and B is **less than 10**, and you have **few circles** in shaded boxes on this page, antidepressants are probably okay, if you and your doctor choose to use them. They can occasionally cause: unusual thoughts, including violent and suicidal ones; irritability; too much energy; and severe sleep problems. Contact your doctor if you think any of these might be happening to you.
